No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                       1: (SIDS2/gcgdata/geneseqp-embl/AA1980.DAT:*

                                         ρλ
                                        The present sequence is a firefly protein which regenerates luciferin busing oxyluciferin and D-cysteine. This protein can be used for regeneration of luciferin, a substrate for luciferase, used for APP (adenosine triphosphate) assays in both medical and food hygiene areas.

                                                                                                        uciferin. The protein can especially regenerate luciferen from oxyluciferin. The protein can be added to the luciferin-lucifersse reaction system to sustain luminescence and reduce the amounts used. The polynucleotide sequence is useful for producing recombinant transformants, which are useful for the production of proteins useful in assaying ATP in medical sciences and food hygiene.
                                                                                                                                                                                                                                                                                                                                                                                                                1 MGPVVEKIAELGKYTVGEGPHWDHETQTLYFVDTVĖKTFHKYVPSQKKYTFCKVDKLVSF

                                                                                                                                                                                                                                                                      09
         Luciola lateralis-originated genes encoding proteins capable of regenerating luciferin especially from oxyluciferin, useful for producing recombinant DNAs and transformants to give proteins useful in
                                                                                 The present sequence represents a protein capable of regenerating luciferin, which is isolated from Luciola lateralis (Japanese firefly). The gene encoding the protein capable of regenerating luciferin can be used for producing recombinant DNAs and transformants, which can be used for the production of proteins useful in assaying adenosine triphosphate (ATP) in medical sciences and food hygiene. The protein can be added to the luciferin-luciferase reaction system to sustain luminescence and reduce their amounts used.
                                                                                                                                                                                                                                                            1 MGPVVEKIAELGKYTVGEGPHWDHETQTLYFVDTVEKTFHKYVPSQKKYTFCKVDKLVSF

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    74
                                                                                                                                                                                                                                                                                                                                                                                          The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                 New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell interactions -
                                                                                                                                                                                                                         The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and insectiods. Therefore in higher eukaryotes for the development of insectiodes, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIGITG-ABL30511), expressed DNA sequences (ABLIGITG-ABL30511), expressed DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               PQVTSVAFGGPNLDELHVTSAGLQLDDSSLDKSLVNGHVYRVTGLGVKGFAGVKVKL 308

                                                                                                                                                               The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell:cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins

                                                                                                                                                                                                                                                                                                                                                           The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention 1000 useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention sequences genomic DNA sequences (ABL16176ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABL01840-ABL16175) and the encoded proteins the sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ttp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                           New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  190 TLSISNQRPLFTFEKHEVPGY--PDGQTIDEEGNLWVAVFQGQRIIKISTQQPEVLLDTV

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             74
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                           New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                   The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       VGEGPHWDHETQTLYFVDTVEKTFHKYVPSQKKYTFCKV--DKLVSFIIPLAGSPGRFVV

The invention relates to a senescence marker protein 30 (SMP30) non-human animal having a defect in the SMP30 function. The animals are useful for producing antibody, evaluating its biological function, histopathological diagnosis and onset mechanism of disease due to aging, and in screening side-effects during development of drug and cosmetics including for

It encodes the human ageing marker protein, SMP30 (AAR74219). Human SMP30 is found in human organs, tissues, blood, urine and cerebrospinal fluid. The blood concentration of SMP30 is known to increase with renal and hepatic deficiencies and to decrease with age. It is therefore useful in the monitoring of renal or hepatic deficiencies and for the monitoring of the development of the liver and kidneys in newborn bables.

The invention relates to a method for diagnosing a disorder characterised by expression of a human cancer associated antigen precursor coded for by a nucleic acid molecule (NAM). The method comprises: (a) contacting a biological sample isolated from a subject with an agent that specifically binds to the NAM, an expression product or a fragment of an expression product complexed with an HLA molecule; and (b) determining the interaction between the agent and the NAM or the expression product as a determination of the disorder. The products and methods can be used in the diagnosis, monitoring, research, or treatment of conditions the invention provides nucleic acid sequences and encoded polypeptides which are cancer associated antigen precursors expressed in human breast cancer. remal cancer, colon cancer, gastric cancer, prostate cancer and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ---TAPAVLERHQGALYSLFPDHHVKKYFDQVDISNGLDWSLDHKIFYYIDSLSYSVDAF 178

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            œ
                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is that of human senility marker protein (hSMP30) which has a molecular weight of 30 kDa. Monoclonal antibodies recognising hSMP30 are claimed and can be used in a method for detection of the hSMP30 protein in a sample.

Sequences AABI1630-BI1688 represent proteins from Agrobacterium vitis which elicit a hypersensitivity response (HR) in a plant. The invention also relates to nucleotide sequences (AAAG1501-A61524) encoding the A. vitis HR elicitor proteins. The HR is a rapid, localised necrosis that is associated with the active defence of plants against many pathogens, and occurs when a pathogenic organism interacts with a nonhost plant (i.e. one in which intracellular becarial growth and disease development do not occur). Like other HR elicitors, the A. vitis elicitor functions in non-host plants by causing a rapid hypersensitive response that results in walling-off and killing of the pathogen. On grape plants, the A. vitis elicitor induces a restricted necrosis of tissues, resulting in the death of plant cells and induction of pathogen resistance. A. vitis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 HR elicitor proteins, in non-infectious form, are used to treat plants the lateitor proteins, in non-infectious form, are used to treat plants or their seeds to impart resistance to disease, such as those caused by fund; bacteria or viruses; and to enhance growth, e.g., to increase yield or to provide earlier germination or maturation. The proteins can also be used to control insects, to impart resistance to environmental stresses, e.g., cold, and to import resistance to environmental content. The same effects can be produced by producing transgenic plants or seeds by incorporation of DNA that encodes A. vitis HR elicitor proteins. Ose of A. vitis HR elicitor proteins, or nucleic acids encoding them, may allow control of previously untreatable diseases; provide systemic treatment; and eliminate the need for biological control agents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New protein from Agrobacterium vitis, useful e.g. for imparting resistance to disease or stress to plants, is involved in production of
                                            Hypersensitive response elicitor protein; HR; disease resistance;
insecticide; fungicide; antiviral; bactericide; growth enhancer;

    A. vitis hypersensitive response elicitor protein, SEQ ID NO:29.

New protein from Agrobacterium vitis, useful e.g. for imparting resistance to disease or stress to plants, is involved in production of a hypersensitive response

Claim 3; Page 102-104; 1:57pp; English.

Sequences Ambitions represent proteins them which elicit a hypersensitivity response (HR) in a plant. The invention also relates to nucleotide sequences (AAA61501-A61524) encoding the A. vitis HR elicitor proteins. The HR is a rapid, localised necrosis that c. is associated with the active defence of plants against many pathogens, and occurs when a pathogenic organism interacts with a nonhost plant c. is not in which intracellular bacterial growth and disease development of nor occurs. Like other HR elicitors the A. vitis elicitor functions in non-host plants by causing a rapid hypersensitive response that c. results in walling-off and killing of the pathogen. On grape plants, the c. A. vitis elicitor induces a restricted necrosis of tissues, resulting in the elicitor proteins, in non-infectious form, are used to treat plants or the death of plant cells and induction of pathogen resistance. A. vitis elicitor proteins, in non-infectious form, are used to treat plants or their seeds to impart resistance to disease, such as those caused by clungi, bacteria or viruses; and to enhance growth, e.g., to increase yield or to provide earlact germination or maturation. The proteins can also be used to control insects, to impart resistance to environmental content. The same effects can be produced by producing transgenic plants or seeds by incorporation of DNA that encodes A. vitis HR elicitor proteins. Use of A. vitis HR elicitor proteins, and allow control of previously untreatable diseases; provide systemic treatment; and eliminate the need for biological control agents or polluting chemicals. Sequences AAB11630-B11688 represent proteins from Agrobacterium vitis

Considerated ORF (open reading frame) 1-4534, and sequences ABM75054-
ABM79587 represent CDNAs encoding them. The invention also encompasses polypeptides at least 80% identical to the ORF1-ORF4534 (collectively polypeptides at least 80% identical to the ORF1-ORF4534 (collectively referred to as ORFX) proteins, olynnucleotides at least 85% identical to polypeptides. The read sequences, vectors and host cells comprising ORFX polynnucleotides. The recombinant production of ORFX proteins, antibodies specific for ORFX proteins, methods of screening for modulators of ORFX proteins antibodies specific for ORFX proteins, methods of screening individuals for a predisposition to an operative of screening individuals for a predisposition or activity, and methods of screening individuals for a predisposition to an office of screening individuals of the invention have a wide carrivity, and methods of screening individuals for a predisposition to an office of screening individuals of the invention have a wide carrivity and methods of screening individuals of the invention of the carrivity individuals of the involved in the determination of antificative activity, and may also be involved in the determination of bodily characteristics, fertility and behaviour. OffX proteins, or ther proliferative disorders such as sporlassis and benign tumours, or theory of and antibodies may be used in the treatment of cancers, or ther proliferative disorders such as sporlassis and antibodies may also be used as a cardiovascular disease, immune system disorders, disorders related to organ transplantation, disorders of tissue growth and regeneration of organ transplantation, disorders of tissue growth and regenerate of primers and probes, in the detection of forex genences. In generate dispanses, and infections diseases caused by viral, benefit dispanses, in generate dispanses, and infections of primers, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             115 DPLGNLWTGTMAIDAGLPVGPVT----GSLYHLGADKKVKMHESNIAIANGLAWSNDLK 169

IN THE LIVER. DECREASE OF SMP30 LEADS TO THE DYSREGULATION OF CALCIUM SIGNALING IN THE REGULATION OF CALCIUM SIGNALING. THE AGED LIVER.

C -1- SUBCELLUIAR LOCATION: Cytoplasmic.

C -1- TISSUE SPECIFICITY: MAINLY PRESENT IN THE LIVER. WEAK EXPRESSION WAS FOUND IN THE BRAIN AND LUNG, NOT FOUND IN THE KIDNEY.

C -1- DEVELOPMENTAL STAGE: PROTEIN AMOUNTS IN LIVER DECREASE

SIGNIFICANTLY WITH AGE.

"Higher-plant chloroplast and cytosolic 3-phosphoglycerate kinases: case of endosymbiotic gene replacement.";
Plant Mol. Biol. 30:65-75(1996).
-!- CATALYTIC ACTIVITY: ATP + 3-phospho-D-glycerate = ADP + 3-phospho-D-glyceroyl phosphate.
-!- PATHWAY: Second phase of glycolysis; second step.
-!- SUBCELLULAR LOCATION: Cytoplasmic.
-!- SIMILARITY: BELONGS TO THE PHOSPHOGLYCERATE KINASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                Indels 141;
